Introducing BetterAge, a new digital service to help community organizations to track and improve 12 dimensions of health and well-being for their clients and volunteers. Discover how volunteer caregiving organizations can use this assessment to learn more about their clients, tailor programs and services to meet their needs, and advocate for funding.

- **BetterAge** is fundamental in tracking client issues that can benefit from early intervention and monitoring annual indicators for both individuals and the organization as a whole
- **BetterAge** can be used to trigger a follow-up visit with a homebound client who may be suffering more deeply from loneliness and social isolation
- Use **BetterAge** as the basis for implementing a new volunteer program, **Managing Assets for Security and Health (MASH)**. Sponsored by Ventura County Behavioral Health with the goal of combatting housing insecurity among low-income older adults, BetterAge triggers the review for individuals who may be struggling, surviving, or on the verge of a crisis. MASH follows with a unique opportunity to leverage the talents of your volunteer base in identifying and offering solutions that may not have been previously considered.

NVCN invites you to explore this new integration into **CareWorks** to monitor individual developments while learning more about your organization's overall trends, improving the odds for helping older adults to age in place.

- Partner with graduate interns and bachelors' candidates to support your organization in collecting assessment data over the phone
- Tailor programs to respond to the needs of the unique communities you serve
- Develop innovative programs that respond to the needs of the unique communities you serve
